

**If FileNet P8 is driving
your business...**

**...then OIS FileSystem
will drive it's contents!**

The challenge

FileNet P8 provides an advanced solution for storing all your documents and files in a safe and secure place. However, while you are still using older, less advanced applications, you face an integration hurdle. These older applications access network drives to create and retrieve documents, yet they are unable to access the P8 library.

The architectural context of OIS

The solution

OIS FileSystem (OFS) removes the integration hurdle. This innovative solution opens a direct path from your older applications to your P8 system.

As a regular Windows file server on your network, OFS appears as a familiar network drive to your applications. However, OFS translates all low-level file-commands, in real-time, into the necessary requests to your P8 library:

- to create documents;
- to retrieve documents;
- to edit documents.

Within any Windows application, store your documents by selecting the OFS drive in the Save As dialog and browsing to the right folder in P8. Likewise, use the Open File dialog in your application to retrieve a document from your P8 library. Safe and simple; OFS uses Windows authentication and takes care of all the checkout and checkin actions when necessary.

Easy implementation

OFS is available on all operating systems supported by FileNet P8. A one-day configuration on your network is all it takes to get you up and running. No client installation needed.

Take control of your integration

OFS offers a proven, fully transparent integration with all of your important business applications, without redundant storage and without any client installation. Besides ensuring better compliance, OFS can likely double the value you get from your FileNet P8 investment. Why discuss or worry any longer about your integration? Choose OFS to 'drive' the contents of your P8 library.

Company profile

OIS is a Dutch ICT company founded in 1996. OIS combines its strengths in development, consulting and maintenance to provide innovative solutions in the area of document and workflow management.

Based on a standard framework of software components, OIS develops products for the public and financial markets. Leading Dutch organizations in both markets work with solutions from OIS. This success is realized by the competence of the employees and their close involvement with the customers and partners.
